

### LD1117A SERIES

# LOW DROP FIXED AND ADJUSTABLE POSITIVE VOLTAGE REGULATORS

- LOW DROPOUT VOLTAGE (1.15V TYP. @ I<sub>OUT</sub> = 1A, 25°C)
- VERY LOW QUIESCENT CURRENT (5 mA TYP. @ 25°C)
- OUTPUT CURRENT UP TO 1A
- FIXED OUTPUT VOLTAGE OF: 1.8V, 2.5V, 2.85V, 3.3V, 5.0V
- ADJUSTABLE VERSION AVAILABILITY (V<sub>rel</sub> = 1.25V)
- INTERNAL CURRENT AND THERMAL LIMIT
- ONLY 10 µF FOR STABILITY
- AVAILABLE IN ± 2% (AT 25°C) AND 4% IN FULL TEMPERATURE RANGE
- HIGH SUPPLY VOLTAGE REJECTION: (80dB TYP. AT 25°C)
- TEMPERATURE RANGE: 0°C TO 125°C

The LD1117A is a LOW DROP Voltage Regulator able to provide up to 1A of Output Current, available even in adjustable version (Vref=1.25V). Concerning fixed versions, are offered the following Output Voltages: 1.8V, 2.5V, 2.85V, 3.3V and 5.0V. The 2.85V type is ideal for SCSI-2 lines active termination. The device is supplied in:

SOT-223, DPAK and TO-220. The surface mount packages optimize the thermal characteristics even offering a relevant space saving effect. High efficiency is assured by NPN pass transistor. Only a very common  $10\mu\text{F}$  minimum capacitor is needed for stability. Only chip trimming allows the regulator to reach a very tight output voltage tolerance, within  $\pm$  2% at 25 °C.

#### **BLOCK DIAGRAM**

January 2003 1/16

#### **ABSOLUTE MAXIMUM RATINGS**

| Symbol           | Parameter <sup>2</sup>               | Value       | Unit |
|------------------|--------------------------------------|-------------|------|
| V <sub>IN</sub>  | DC Input Voltage                     | 10          | V    |
| P <sub>tot</sub> | Power Dissipation                    | 12          | W    |
| T <sub>stg</sub> | Storage Temperature Range            | -40 to +150 | °C   |
| T <sub>op</sub>  | Operating Junction Temperature Range | 0 to +125   | °C   |

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these condition is not implied. Over the above suggested Max Power Dissipation a Short Circuit could definitively damage the device.

#### **THERMAL DATA**

| Symbol                | Parameter                           | TO-220 | SOT-223 | DPAK | Unit |
|-----------------------|-------------------------------------|--------|---------|------|------|
| R <sub>thj-case</sub> | Thermal Resistance Junction-case    | 3      | 15      | 8    | °C/W |
| R <sub>thj-amb</sub>  | Thermal Resistance Junction-ambient | 50     |         |      | °C/W |

#### LD1117A ADJUSTABLE: APPLICATION NOTE

The LD1117A ADJUSTABLE has a thermal stabilized 1.25 $\pm$ 0.012V reference voltage between the OUT and ADJ pins. I<sub>ADJ</sub> is 60 $\mu$ A typ. (120 $\mu$ A max.) and  $\Delta$ I<sub>ADJ</sub> is 1 $\mu$ A typ. (5 $\mu$ A max.).

R1 is normally fixed to  $120\Omega$ . From figure 7 we obtain:

 $V_{OUT} = V_{REF} + R2 (I_{ADJ} + I_{R1}) = V_{REF} + R2 (I_{ADJ} + V_{REF}/R1) = V_{REF} (1 + R2 / R1) + R2 x I_{ADJ}$ . In normal application R2 value is in the range of few Kohm, so the R2 x  $I_{DJ}$  product could not be considered in the  $V_{OUT}$  calculation; then the above expression becomes:

 $V_{OUT} = V_{REF} (1 + R2 / R1).$ 

In order to have the better load regulation it is important to realize a good Kelvin connection of R1 and R2 resistors. In particular R1 connection must be realized very close to OUT and ADJ pin, while R2 ground connection must be placed as near as possible to the negative Load pin. Ripple rejection can be improved by introducing a 10µF electrolytic capacitor placed in parallel to the R2 resistor (see Fig.8).
